In [2]:
```
# 1.Read first line write a program to open sample.txt and print only the first lin
with open("sample.txt","r") as f:
    print(f.readline())
```

```
Good Afternoon !!!
```

In [4]:
```
# 2.Write and Read back write "welcome to the logical world of python" into a file
with open("sample.txt","w")as f:
    f.write("welcome to the logical world of python")
with open("sample.txt","r")as f:
    print(f.read())
```

```
welcome to the logical world of python
```

In [5]:
```
# 3.Count Characters Read a file and print the total number of characters.
with open("sample.txt","r")as f:
    data=f.read()
    print("Total Characters: ",len(data))
```

```
Total Characters:  38
```

In [6]:
```
# 4.Print Specific Line Print the 3rd line from myfile.txt using readlines().
with open ("myfile.txt","r")as f:
    lines=f.readlines()
    print(lines[2])
```

```
Currently I purcuing the MCA.
```

In [7]:
```
# 5.Append Mode Add "This is appended text from write your name " to the end of a f
with open("myfile.txt","a")as f:
    f.write("This is appended text from Vaishnavi")
print("Text appended successfully")
```

```
Text appended successfully
```

In [8]:
```
# 6.Seek Practice Jump to the 10th character using seek() and print the next 5 char
with open("myfile.txt","r")as f:
    f.seek(10)
    print(f.read(5))
```

```
 Vais
```

In [9]:
```
# 7.Line Numbering Print each line with its line number (like 1: First line).
with open("myfile.txt","r")as f:
    lines=f.readlines()
    for i in range(len(lines)):
        print(i+1,":",lines[i],end=" ")
```

```
1 : Hello I am Vaishnavi.
 2 : I have completed graduation in Pune.
 3 : Currently I purcuing the MCA.This is appended text from Vaishnavi
```

In [10]:
```
# 8.Reverse File Content Read all lines and write them into another file in reverse
with open("sample.txt","r")as f:
    lines=f.readlines()
```

```
with open("reverse.txt","w")as f:
    for line in reversed(lines):
        f.write(line)
print("Lines written in reverse order")
```

```
Lines written in reverse order
```

In [13]:
```
# 9.Word Frequency Counter Count how many times each word appears in a file and dis
with open("sample.txt","r")as f:
    words=f.read().lower().split()
frequency={}
for word in words:
    if word in frequency:
        frequency[word] += 1
    else:
        frequency[word] = 1
print(frequency)
```

```
{'good': 1, 'afternoon': 1, '!!!': 1, 'i': 1, 'am': 1, 'vaishnavi.': 1}
```

In [14]:
```
# 10.File Comparison Compare two files and print whether their contents are identic
with open("file1.txt","r")as f:
    data1=f.read()
with open("file2.txt","r")as f:
    data2=f.read()
if data1 == data2:
    print("Files are identical.")
else:
    print("Files are different.")
```

```
Files are different.
```

In [15]:
```
# 11.Copy Selected Lines Copy only even-numbered lines from one file into another.
with open("sample.txt","r")as f:
    lines = f.readlines()
with open("Evenline.txt","w")as f:
    for i in range(len(lines)):
        if (i + 1) % 2 == 0:
            f.write(lines[i])
print("Even numbered lines copy successfully.")
```

```
Even numbered lines copy successfully.
```
